WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** Still much uncertainty of the potential need to designate High Risk conditions later this week and weekend for increasing chance of isolated mountain thunderstorms *****

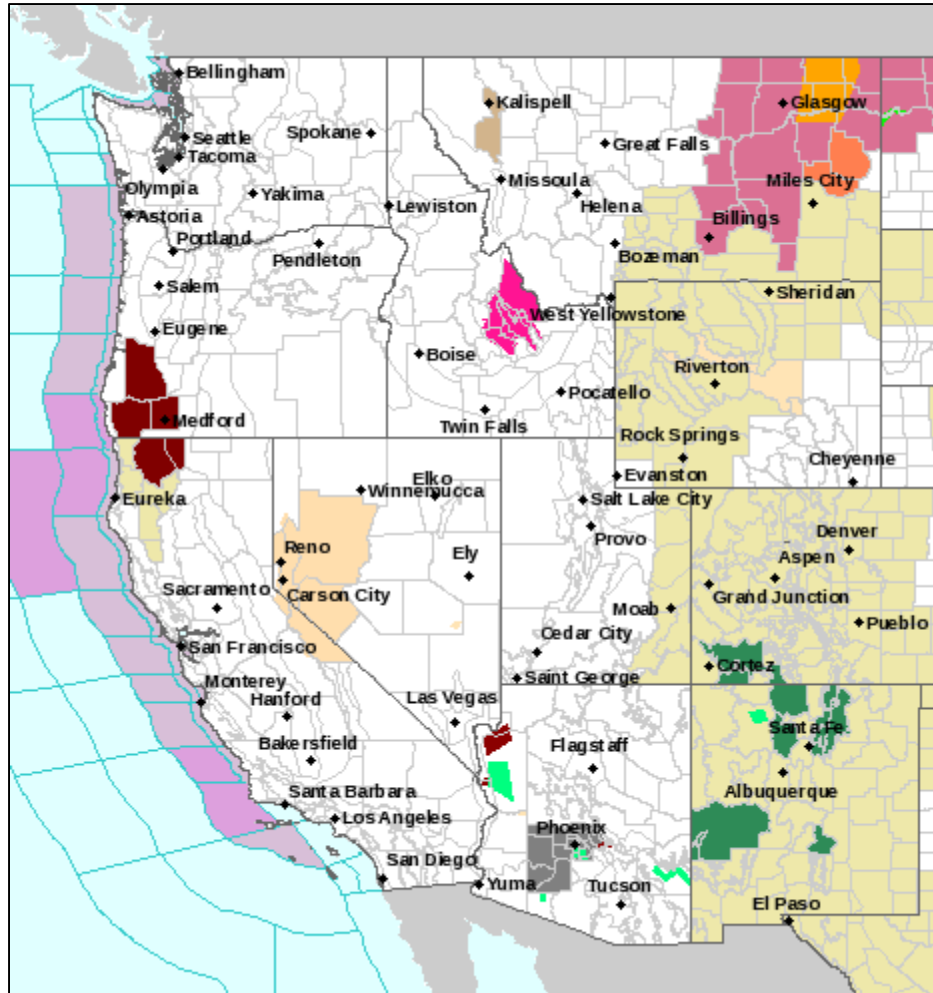

Strong high pressure currently centered east of us will be taking over our weather pattern through the upcoming weekend as it becomes quite established in the 4-Corners area and extends well westward across California. Hot, dry, mostly clear conditions will prevail with the warmest inland areas around 105 each day into the foreseeable future. A bit of moisture will be spreading north later this week, but it remains uncertain how many thunderstorms may develop over the Northern California region from that. For now, expect a small chance of isolated afternoon and evening mountain thunderstorms developing Wednesday onward. They may reach as far north as Hwy 50 Wednesday, then they look more possible but wetter over all our mountains Thursday and Friday and just in the north Saturday. Beyond this weekend, thunderstorm details are even more uncertain.

Some northerly breezes will linger in the Sacramento Valley this morning, then breezy W to NW winds (gusts to around 20 mph locally) will develop in some western areas this afternoon. After today, most areas will have quite light winds, although some areas of moderate afternoon W to NW winds will continue in the western portion of the region.

SOUTHERN CALIFORNIA

Scattered wet thunderstorms produced some brief heavy rain yesterday, mainly over the Mojave National Preserve and the desert sides of the Cleveland and San Bernardino. Except for a few locations in the desert, precipitation totals were under a tenth of an inch. Storms which occurred last night over Arizona have generated quite a bit of dust which will be visible during the morning hours across Southern California. The airmass will remain quite humid today and Wednesday, which will lead to scattered wet thunderstorms once again across the Sierras and over areas from Los Angeles County south and eastward as well as the deserts south of I-15. Brief heavy rain will be possible from the storms as they propagate westward. The storms may reach some foothill and urban interface areas of Southern California during the late afternoon today. Temperatures will remain 5-10 degrees above normal. Winds will remain light except for during the passage of convection. There will be a slightly better chance of storms Wednesday due to a deeper surge of moisture slated to reach the deserts during the afternoon. Some convection may continue during the overnight hours Wednesday night into Thursday. The second half of the week and into the weekend, look for a gradual reduction in storms and by Friday, most storms will be confined to the Sierras and high desert. No storms are expected across the central coast southward to Santa Barbara County throughout the period. Temperatures will drop back into the upper 80s and lower 90s in the valleys by the weekend as onshore flow resumes.
